

The exposure record for your workforce.

Exposia turns the Apple Watch your workers already wear into continuous occupational exposure records for UV and noise, giving Australian HSE managers exceedance triage, audit-ready due-diligence packs, and targeting for mandatory spend like audiometric testing.

MODULES

UVDose — continuous UV exposure records from Time in Daylight and the ARPANSA UV index: crew aggregation, exceedance triage, and PPE program evidence.

NoiseDose — indicative noise dose monitoring against the 85 dB(A) LAeq,8h standard: targets audiometric testing spend at the workers who actually need it.

HeatDose — heat-load trend and rest-cycle planning intelligence for outdoor crews. Coming soon.

PRICING

Monitor

\$6

per worker / month

Comply

\$9

per worker / month

Suite

\$14

per worker / month

Per-worker-per-month, annual contracts, 25-worker minimum.

Exposia Comply: \$108 per worker, per year.

WHAT IT REPLACES

Calibrated dosimeter
\$2,500 /unit

Site noise survey
\$3,000-5,000

Audiometric test
~\$70 /worker

Average NIHL claim
\$7,000

START WITH A PILOT

90 days, up to 50 workers, one site, for a fixed \$2,500, credited in full against your first annual contract. It includes deployment support, one mid-pilot review, and a closing exposure report you keep regardless of what happens next.

90 days • ≤50 workers • \$2,500 credited
